Allowable Subject Matter

1. Claims 1-13, 16-27, 29-31 are allowable over the prior art of records.
2. The following is an Examiner's statement of reasons for the indication of allowable subject matter: Claims 1, 9, 20, 16, 19-20, 24, 29-31, are allowable over the prior art of record because the prior arts, cited in its entirety, or in combination, do not teach wherein a receiver in the simultaneous bi-directional port having input hysteresis, the output node including an input node coupled to the output node of the driver and the input hysteresis having a threshold set such that the initial voltage value does not change an output state of the receiver (claims 1, 31); the driver comprise a pullup transistor having an output impedance, and a pull-down transistor having an output impedance the output impedance of the pull-up transistor being greater than the output impedance of the pull-down transistor (claims 9, 19, 29); the receiver includes hysteresis sufficient to allow the receiver to change state only after both the output of the driver and the output node of the second simultaneous bidirectional port circuit are asserted (claims 16, 30); a synchronization circuit to be coupled to the second synchronization circuit on the second integrated circuit, to indicate when the initialization of the simultaneous bidirectional port and an initialization of the second simultaneous bidirectional port is complete (claim 20); wherein output nodes of the first and second data drivers are coupled in common with input nodes of the first and second data receivers, the and the output nodes of the first and second synchronization drivers are coupled in common with input nodes of the first and second synchronization of the receivers (claim 24).

The remaining claims, not specifically mentioned, are allowed for the same rationale as set for their dependency.
